Claims 8-15 are withdrawn from further consideration pursuant to 37 CFR
 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made without traverse in the reply filed on 2/11/05.

- 2. Applicant's election without traverse of claims 1-7, 16-20 in the reply filed on 2/11/05 is acknowledged.
- 3. The IDS has been considered.
- 4. Claims 2-7, 18-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by US Patent No. 5,121,280, hereinafter "King".

King shows a method of synchronizing a magnetic drive 40 to a patterned medium (Figures 3-5) based on a set of first surface variations (index, align sector, servo), and selectively applying 28 magnetic fields to second set of variations (DATA).

Application/Control Number: 10/606,041 Page 3

Art Unit: 2651

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 16 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over King in view of US Patent No. 5,828,510, hereinafter "Yada". King shows the claimed invention, including a magnetic head 24 and a controller 28. However, King fails to show a magnetic layer on a substrate. However, such teachings are well known in the magnetic recording arts. For example, see Figure 9 of Yada. The motivation for combining references can be found in the abstract of Yada. Accordingly, it would have been obvious to one of ordinary skill in the art at the time the invention was made, to modify King, as taught by Yada, to provide an accurate timing pattern.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alan Faber whose telephone number is (571) 272-7553. The examiner can normally be reached on flextime (M-F).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Hudspeth can be reached on (571) 272-7843. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
